27/03/2025, the initiative involved planting 4 Bougainvillea saplings across the campus, with students and faculty actively participating. Each student took responsibility for maintaining a sapling, ensuring its growth through regular care. The initiative not only enhanced campus aesthetics but also fostered a sense of environmental responsibility among participants. Despite initial challenges like sapling sourcing and maintenance during semester breaks, the program successfully contributed to the institution's green mission. Future plans include expanding the initiative with other plant species and integrating an automated irrigation system for better sustainability. The project has been a significant step in promoting ecological balance and green practices within the institution.
