

On 28th June 2022, the Department of Chemistry conducted a discussion on environmental issues for final year Chemistry students as a part of their audit course. The session aimed to create awareness among the students about the current environmental challenges and the role of chemistry in addressing these issues. The event saw participation from 30 students who were enthusiastic and eager to learn more about the topic. The discussion covered various topics such as air pollution, water pollution, and climate change, and their impact on the environment and human health.

The students actively participated in the discussion, asking questions and sharing their opinions on the issues. The discussion also focused on the role of chemistry in finding solutions to these environmental challenges, such as developing sustainable materials, renewable energy sources, and waste management techniques. The session was informative and engaging, providing the students with a better understanding of the environmental issues and the need for sustainable practices.
